Client needs, problem & proposed solution

02 **Design identity**
Concept, logo, colour & typography

03 **Mobile experience**
Flows, wireframes & app screens

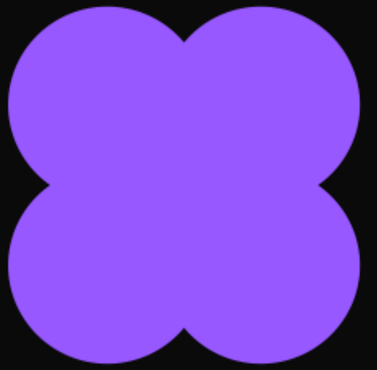

04 **Website direction**
Structure + spaces for work in progress

Client-Based Focus.

CLIENT NEEDS

Our Client, Jason Naidoo, Needs A User-Friendly Website And Mobile Application Where Customers Can Explore Gaming Packages, View Prices, Discover Events, Select Multiple Services, Calculate Estimated Costs (Including 15% VAT), And Submit Their Details To Request A Quotation.

PROBLEM STATEMENT

Customers Currently Lack A Convenient, Centralized Digital Platform To Explore The Arena's Offerings, Compare Packages And Make Informed Booking Enquiries. This Makes Accessing Information And Interacting With The Business Less Convenient.

SOLUTION

We Proposed Developing A Responsive Website And Mobile Application With Simple Navigation, Clear Service Listings, Package Pricing, Booking Selections, Automatic Discount And VAT Calculations, And A Quotation Request Feature.

WHY THIS SCENARIO?

We Selected Next Level Gaming Arena Because It Addresses A Growing Gaming And Esports Market In South Africa. It Also Provides An Opportunity To Combine Creativity, Technology And Practical Functionality While Developing A Solution That Improves The Customer Experience And Strengthens The Business's Online Presence.

Colour With Purpose.

We selected this multi-tonal color palette to pair high-contrast dark bases with fiery warm and cool digital accents. This combination projects a high-energy, futuristic aesthetic tied to innovation while maintaining crisp readability across digital displays.

Inter

One typeface. Clear hierarchy.

This typeface made the most sense to us because its clean, modern and highly legible. Weights and sizes create structure without competing with the content.

A mark built for the arena.

THE NL SHIELD MONOGRAM

Of all the options, this design was selected for its integration of a protective shield with the letters "NL," effectively communicating strength, professionalism, and competitive drive.

Main headings	40 px / 800
Secondary headings — medium / bold	24 px / 500 or 700
Body text — readable, clear supporting information.	16 px / 300 or 400
Error and disclaimer text — essential context and guidance.	14 px / 300 or 400

App Journey.

A direct route from discovery to booking request.

HOME → OFFERS → **BOOKING** → FEES → CONFIRMATION

Offers route

Offers → select package / experience → individual offer → booking

Booking route

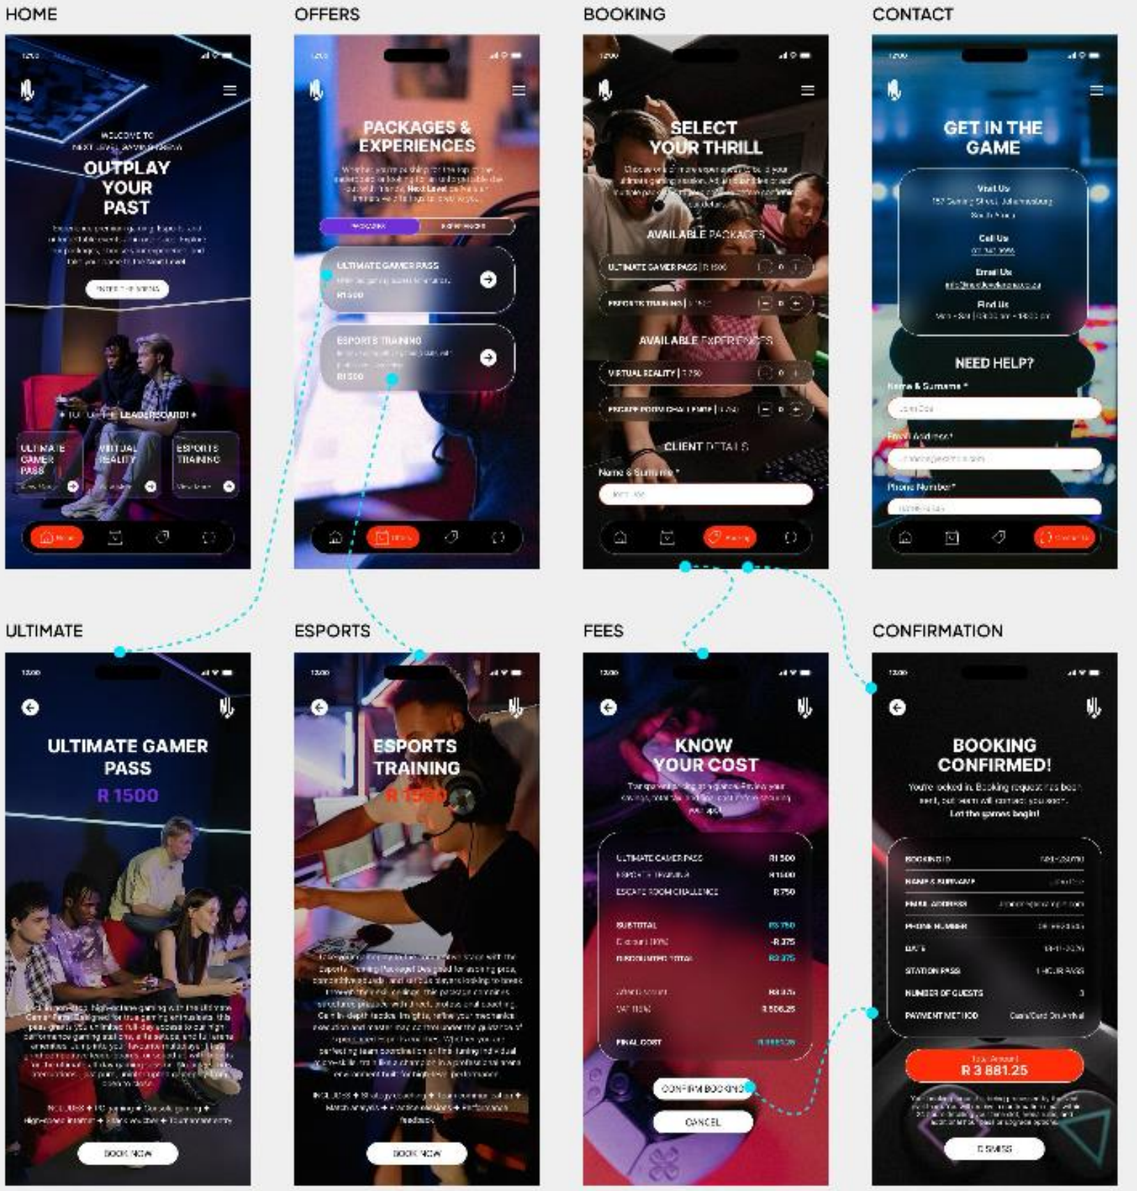

Select services → fill out details → fees calculated → booking confirmed

Contact route

Contact → “Got a question?” → enquiry form → send enquiry

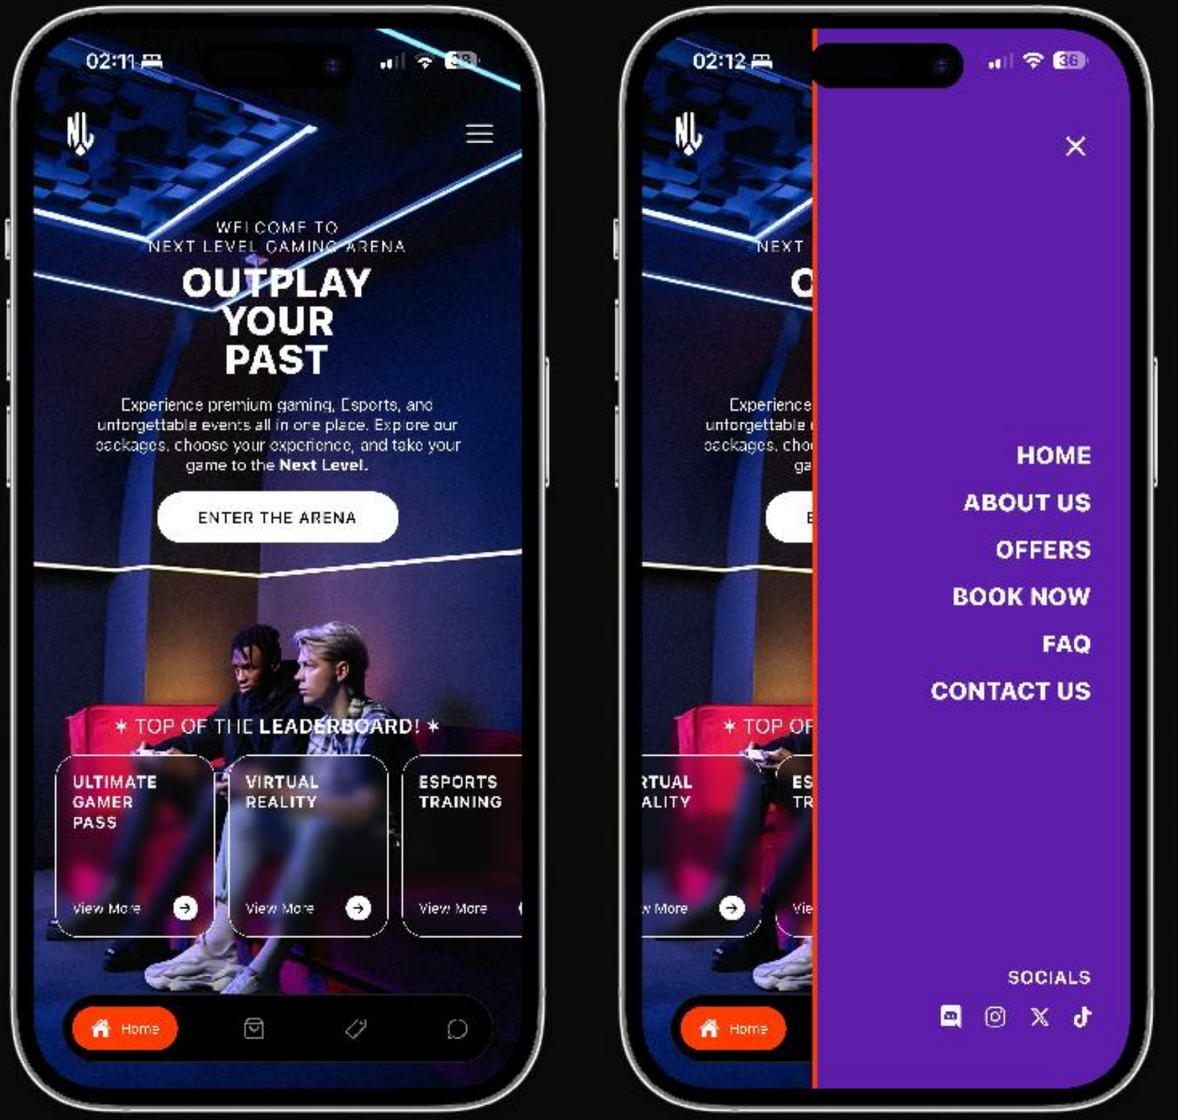

Structure before coding.

Before moving to code, we expanded our wireframes with dotted line linkage to clearly define the app's screen navigation routes. The design features a bold dark-mode aesthetic with high-visibility orange accents, clean typography, and structured content layouts that guide users intuitively from exploration through to booking and payment completion.

Home & Slide Menu.

The Home screen serves as the high-impact landing page to engage users immediately, while the Slide Menu acts as the global slide-in navigation overlay, enabling seamless transitions from Home to all main app routes and social links.

About & FAQ.

Accessed directly through the slide menu, About Us establishes community trust by sharing the arena's origin story and mission, while the FAQ screen supports user confidence by providing clear answers regarding operating hours, venue policies, age limits, and equipment rules.

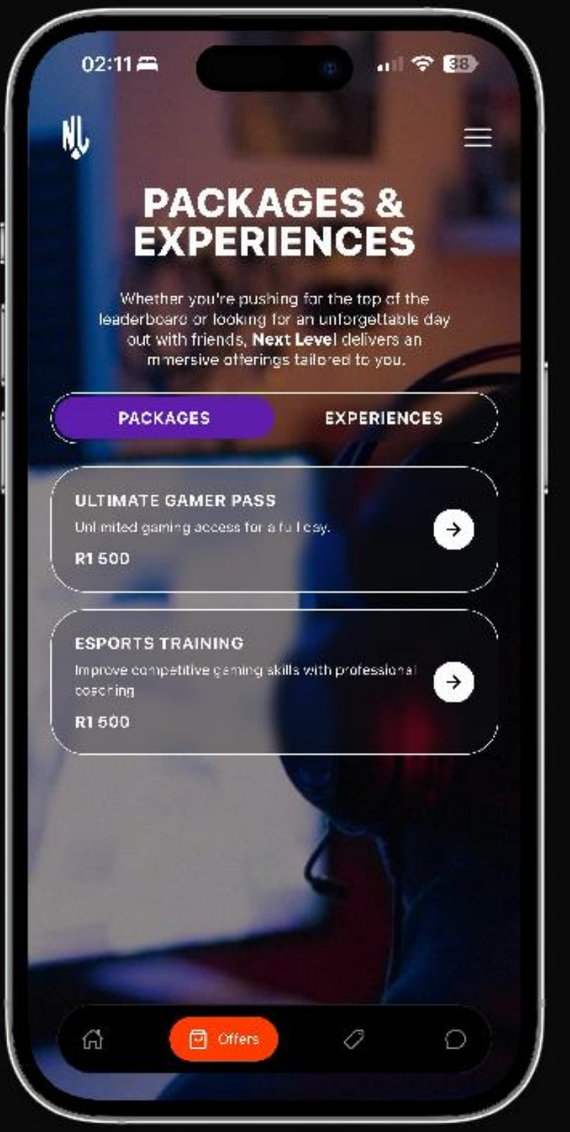

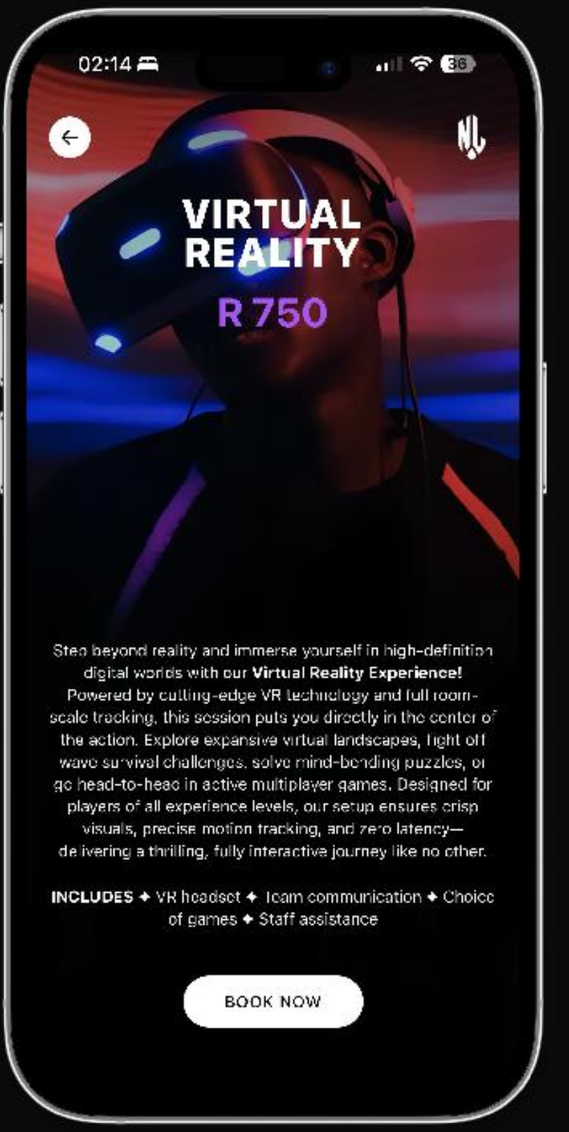

Offers & Individual.

The Offers screen acts as the primary showcase catalog where users browse and toggle between experience options, while the Individual sub-page dives deeper into a single selected package to outline specific inclusions and itemized pricing with a direct pathway into the booking flow.

VIEW OPTIONS → READ MORE

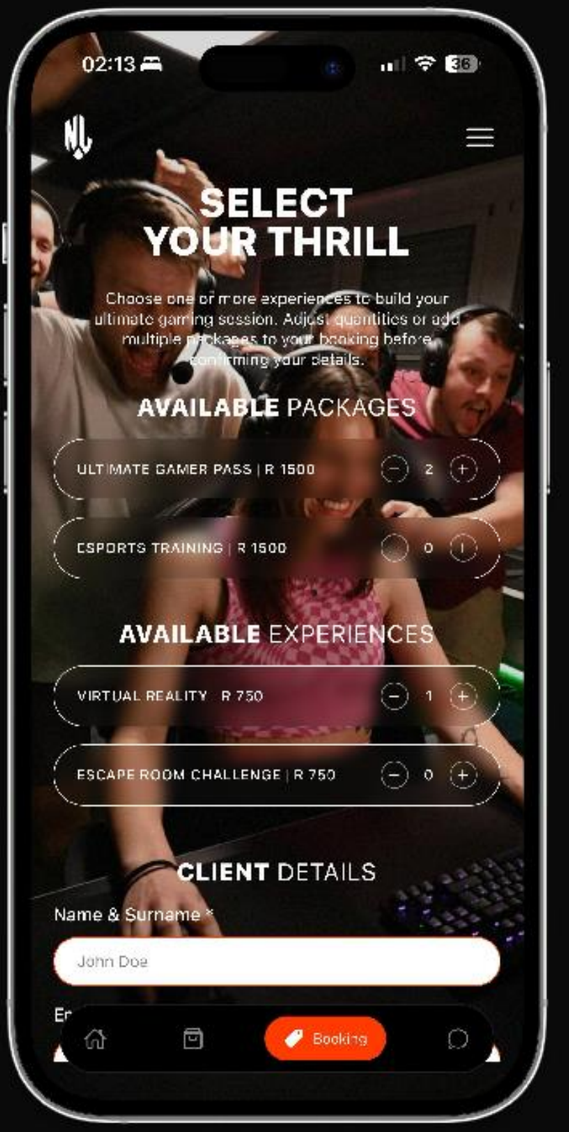

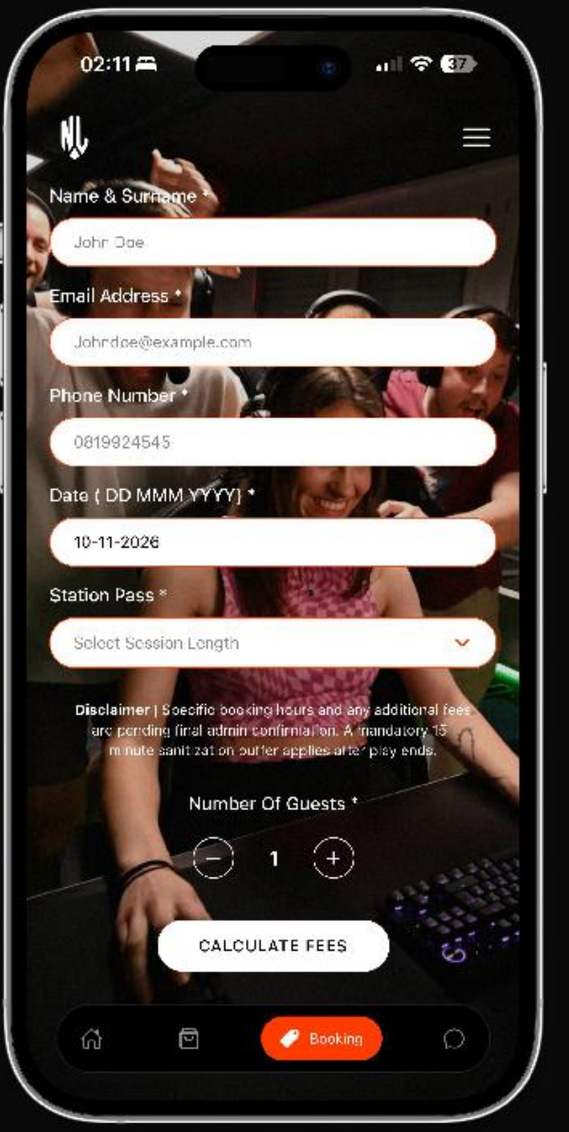

Booking Process.

The Booking screen serves as the entry point for configuring an experience, allowing users to select packages, specify guest counts, enter client details, and initialize the downstream financial calculations.

SELECT OFFER → **FILL IN DETAILS**

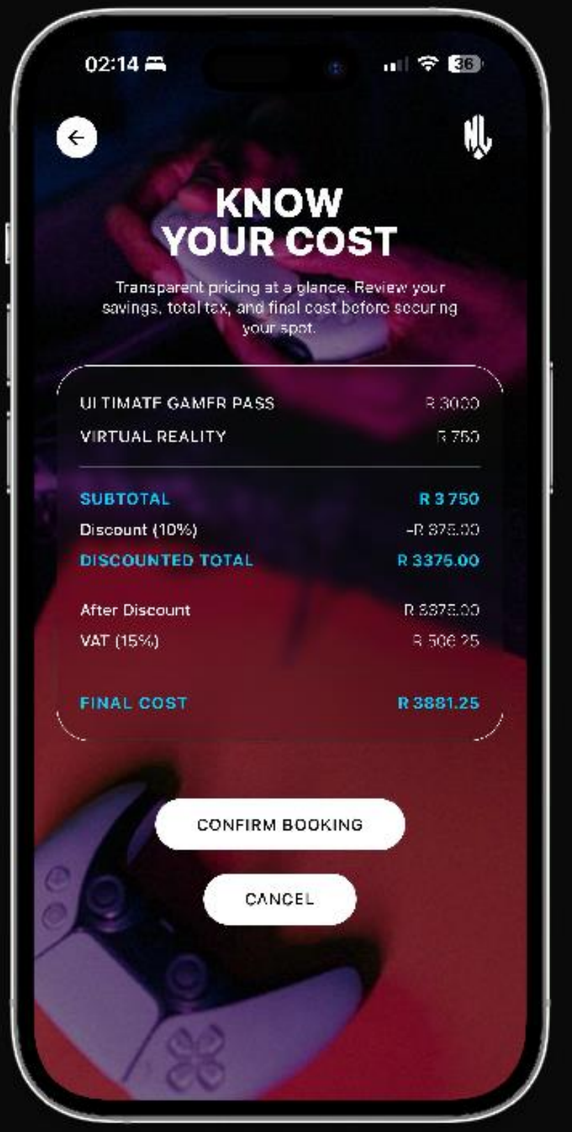

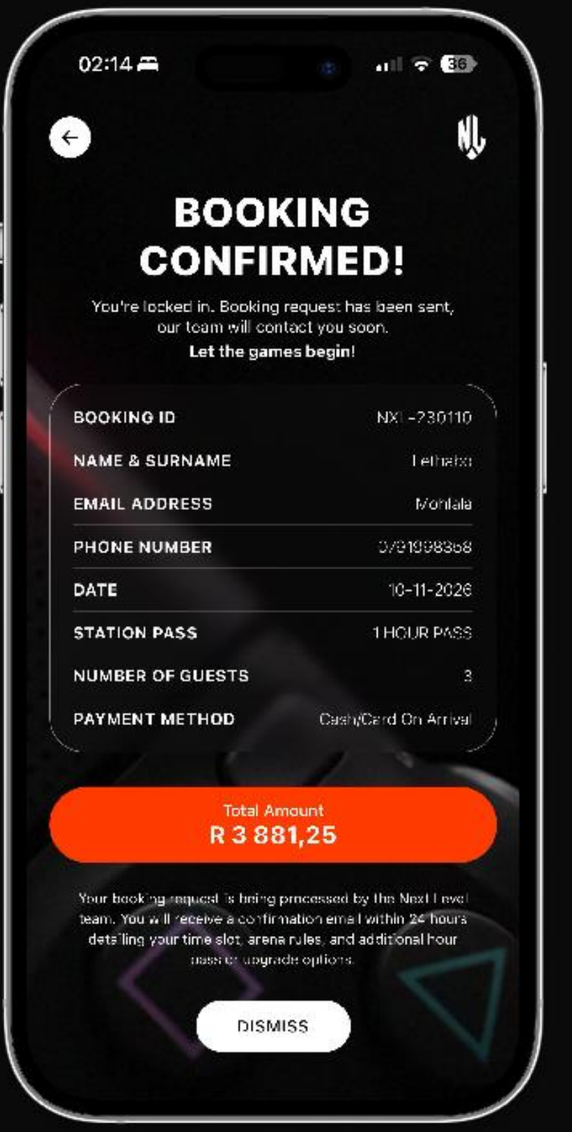

Fees & Confirmation.

Functioning as a sequential checkout pipeline, the Fees screen dynamically calculates itemized sub-totals, tier discounts, and VAT, which then passes into the Confirmation screen to display the finalized invoice, booking verification ID, and completion information.

FEE CALCULATES → **CONFIRM**

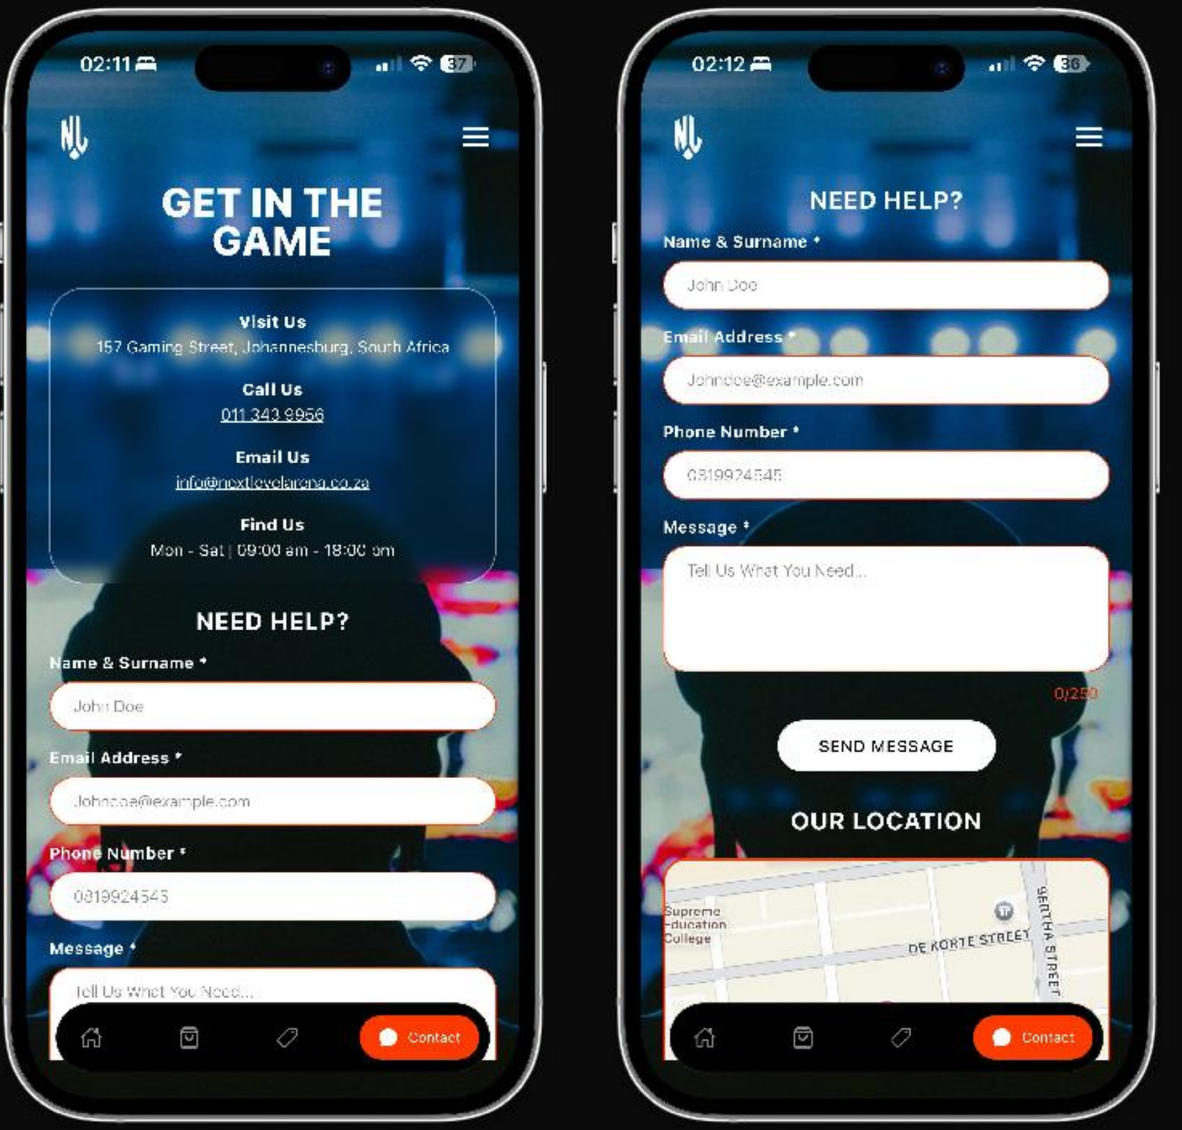

Contact Us.

The Contact screen provides essential venue communication tools, allowing users to locate the physical arena via an interactive map, view direct contact details, and send inquiries through an integrated message form.

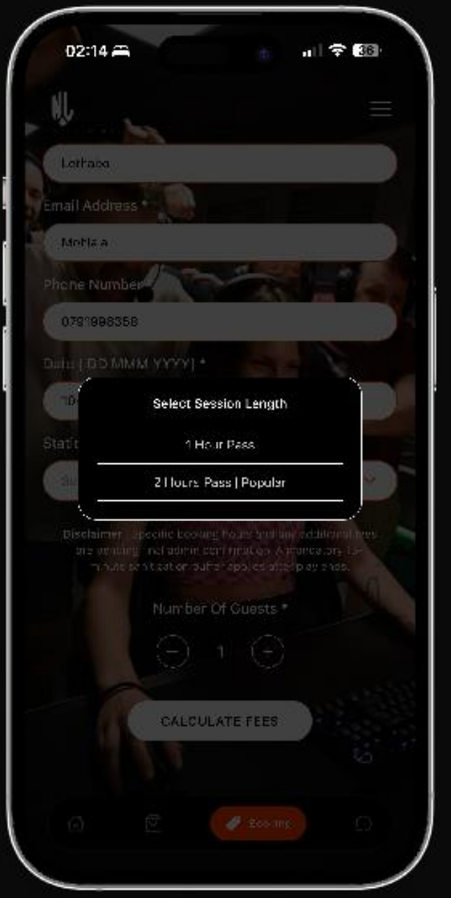

FILL IN ENQUIRY → **SEND IT OUT**

Ultimate Gamer Pass / Esports Training
→ individual offer → booking

Booking request

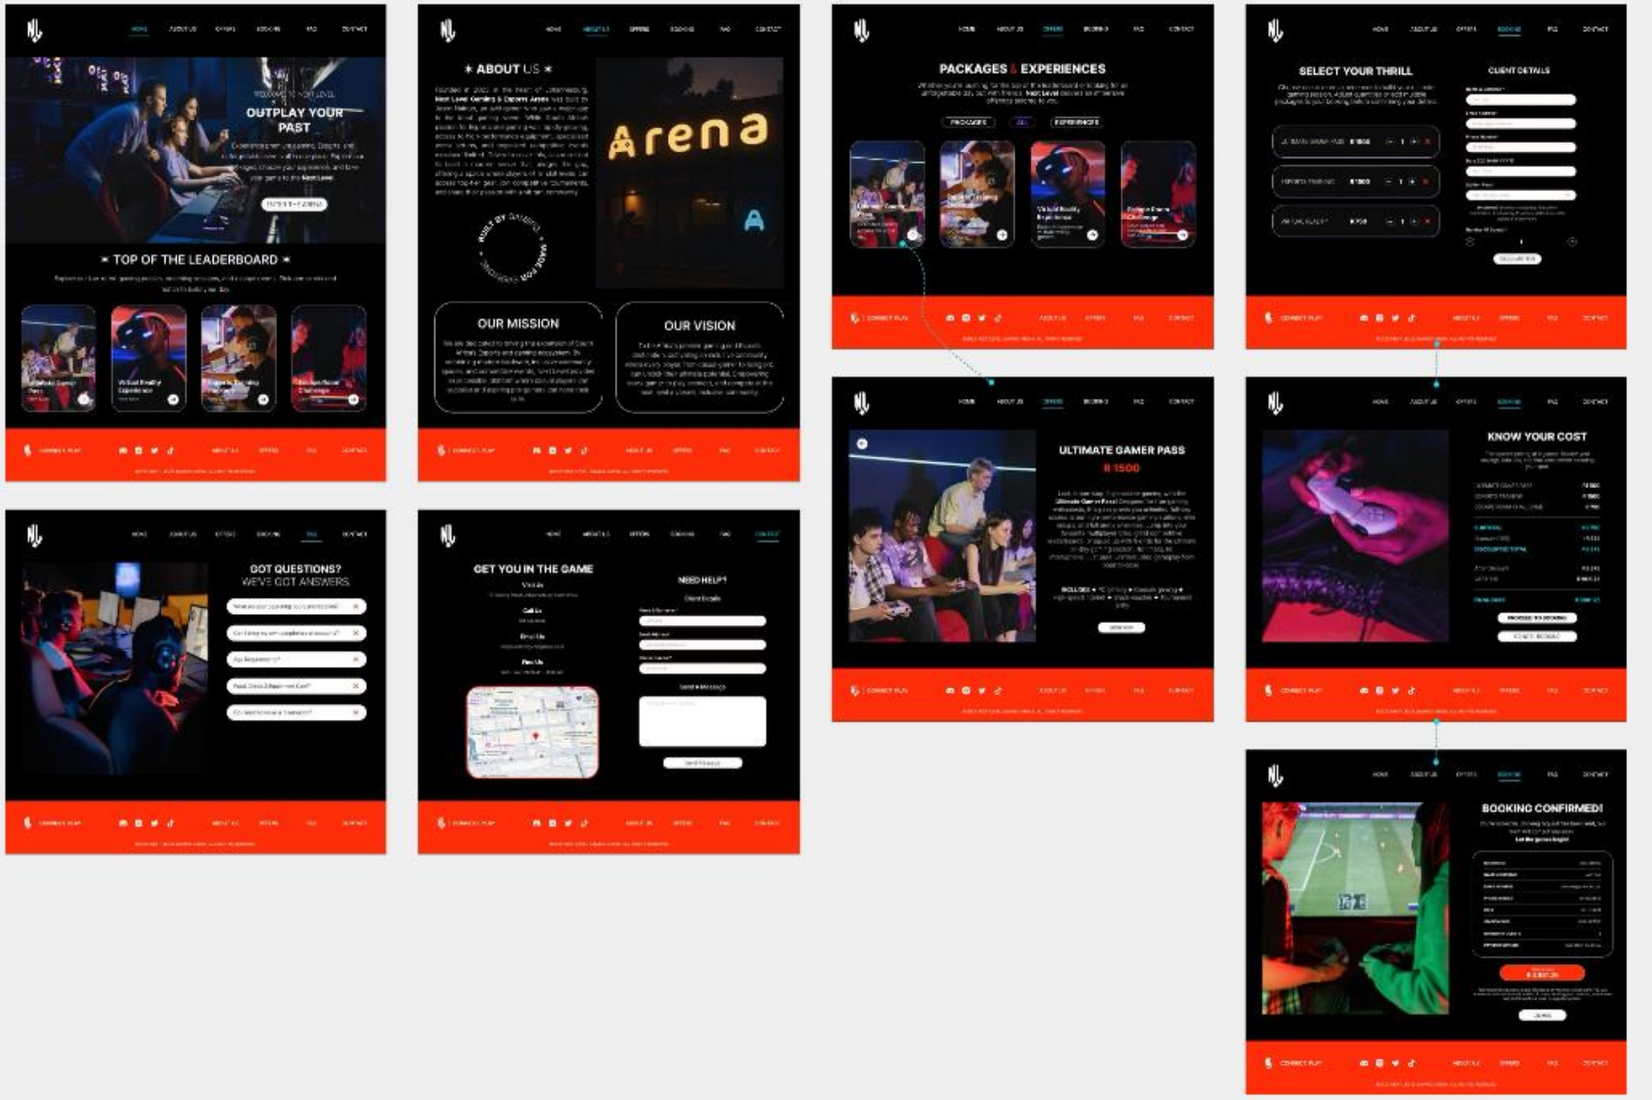

Select experiences → fill details
→ fees calculated
→ booking confirmed screen

Enquiry

Contact → “Got a question?”
→ complete enquiry form
→ send enquiry

Structure before coding.

Designed for desktop screens, the wireframes feature a grid-aligned layout that maximizes horizontal space for content discovery. Key UI components include a persistent top navigation bar, split-screen image-and-text blocks, interactive maps, and expanded comparison tables. High-contrast orange action blocks paired with multi-column footers ground each page to deliver an expansive, multi-layered user experience.

Now for the live demo of the website.
